Barbara J. Gabrys

How to Succeed as a Scientist Barbara J. Gabrys, 2012 This book is based on a series of twenty workshops developed by Jane Langdale in 2005 for postdocs in the Department of Plant Sciences, University of Oxford. The topics were subsequently extended by Barbara Gabrys to cover other disciplines in the Mathematical Physical and Life Sciences Division at Oxford. The motivation for the workshops and for the book, stemmed from a desire to help postdocs gain a thorough understanding of what being a successful academic entails, and to provide a set of tools to help them achieve that goal. The book can also act as a foundation for others who wish to run their own series of workshops - in each chapter we give an example of how we cover the topic--

How to Succeed as a Scientist Barbara J. Gabrys, Jane A. Langdale, 2011-11-03 This unique, practical guide for postdoctoral researchers and graduate students explains how to build and perfect the necessary research tools and working skills to build a career in academia and beyond. It is based on successful training workshops run by the authors: first, it describes the tools needed for independent research, from writing papers to applying for academic jobs; it then introduces skills to thrive in a new job, including managing and interacting with others, designing a taught course and giving a good lecture; and it concludes with a section on managing your career, from how to manage stress to understanding the higher education system. Packed with helpful features encouraging readers to apply the theory to their individual situation, the book is also illustrated throughout with real-world case studies to enable readers to learn from others' experience. It is a vital handbook for everyone seeking to make a successful scientific career.

Applications of Neutron Scattering to Soft Condensed Matter Barbara J Gabrys, 2000-12-21 Neutrons, which are a penetrating yet non destructive probe, are ideally suited to studying the structure, organisation and motion of molecules responsible for the physical properties of materials under a variety of conditions. Applications are in fields as diverse as colloid and polymer science, earth sciences, pharmaceuticals, biology and engineering. This book will be of interest to both present and potential future users of neutron sources working in these areas, as both a useful reference and a comprehensive overview.

Neutrons in Soft Matter Toyoko Imae, Toshiji Kanaya, Michihiro Furusaka, Naoya Torikai, 2011-05-23 Neutron and synchrotron facilities, which are beyond the scale of the laboratory, and supported on a national level in countries throughout

the world. These tools for probing micro- and nano-structure research and on fast dynamics research of atomic location in materials have been key in the development of new polymer-based materials. Different from several existing professional books on neutron science, this book focuses on theory, instrumentation, and applications. The book is divided into five parts: Part 1 describes the underlying theory of neutron scattering. Part 2 describes the various instruments that exist and the various techniques used to achieve neutron scattering or bombardment. Part 3 discusses data treatment and simulation methods as well as how to assess the environment of the sample (temperature, pressure, shear, and external fields). Part 4 addresses the myriad applications of small and large molecules, biomolecules, and gels. Part 5 describes the various global neutron sources that exist and provides an overview of the different reactors.

Dynamics of Soft Matter VICTORIA GARCIA SAKAI, Christiane Alba-Simionesco, Sow Hsin Chen, 2011-12-19 *Dynamics of Soft Matter: Neutron Applications* provides an overview of neutron scattering techniques that measure temporal and spatial correlations simultaneously, at the microscopic and/or mesoscopic scale. These techniques offer answers to new questions arising at the interface of physics, chemistry, and biology. Knowledge of the dynamics at these levels is crucial to understanding the soft matter field, which includes colloids, polymers, membranes, biological macromolecules, foams, emulsions towards biological & biomimetic systems, and phenomena involving wetting, friction, adhesion, or microfluidics. Emphasizing the complementarities of scattering techniques with other spectroscopic ones, this volume also highlights the potential gain in combining techniques such as rheology, NMR, light scattering, dielectric spectroscopy, as well as synchrotron radiation experiments. Key areas covered include polymer science, biological materials, complex fluids and surface science.
